**Course staff**
- Course convener and lecturer: **A/Prof. Vijay Sivaraman**
  
  EE-334, Tel: 9385 6577, Email: vijay@unsw.edu.au
- Tutor: **Dr. Tim Moors**
  
  EE-341, Tel: 9385 4885, Email: t.moors@unsw.edu.au
- Lab Demonstrators: **Dr. Tim Moors, Shihao Yan**

**Consultations**
- Tue 11am—12:00pm
- Students are strongly encouraged to use the open consultation hour rather than contact by email.

**Course details**
- This course is 6 units of credit.
- This course involves lectures, tutorials, and laboratories.
- The expected workload for this course is 10 hours per week.
- Lecture times: Tue 9-11am (MechEng 401) and Thu 10-11am (Law Th G23).
- Tutorials: Mon (odd & even) 3-4pm (Quad 1046) and Tue (even) 3-4pm (Red C 2035).
- Labs: Wed 3-6pm and Fri 12pm-3pm in EE343A (first two labs). Note that you will be expected to work on your programming assignment outside of designated lab hours using the undergraduate computer labs in the EE building.

**Course aims**
This course aims to develop a fundamental understanding of the architecture of data communication networks such as the Internet. It will introduce students to the layered communication protocol stack (referred to as the TCP/IP stack in the Internet context), and progressively work through the functions and technologies at the various layers. Topics covered will include the physical medium, medium access mechanisms, IP addressing and routing, TCP congestion control, and applications such as email, web, and DNS. Particular emphasis will be given to the engineering design choices that have helped shape today’s Internet.

**Relation to other courses**
This course provides an introduction to data networking, and establishes the foundation for subsequent courses such as TELE3119 “Trusted Networks” which covers the security aspects of data networks, and TELE4642 “Network Performance” which studies tools and techniques for analysing the performance of data networks.
Student learning outcomes

Upon successful completion of this course, you will be able to:

- Describe the role of layers in the architecture of a communication system
- Distinguish the architectural differences between telephone and data networks
- Evaluate medium access mechanisms suitable to different physical media
- Design simple data networks by constructing appropriate IP addresses and routes
- Analyse mechanisms for reliability and congestion-control in the Internet
- Recognise the steps by which applications such as email and web operate
- Construct client-server applications that operate over the Internet

The course delivery methods and course content address a number of core UNSW graduate attributes; these include:

- The skills involved in scholarly enquiry: This course develops an attitude towards keeping up to date with the latest methods and technology.
- An in-depth engagement with the disciplinary knowledge in its inter-disciplinary context: This course will help appreciate the societal context and technological and market advances in other disciplines that have helped shape the Internet.
- The capacity for analytical and critical thinking and for creative problem solving: This course develops the ability to analyse and criticise the design decisions that have shaped the Internet, and to indulge in design problems outside the limits of principles and examples used in teaching.
- The ability to indulge in independent and reflective learning.
- The skills to appropriately locate, evaluate, and use relevant information.
- The capacity to contribute to and work within the international community.
- The skills required for collaborative and multi-disciplinary work.

The rationale behind the approach to learning and teaching

- This course covers a significant breadth of content, and I am providing video recordings of the lectures so that students can watch it prior to coming to lectures, and use class time for discussions. I believe that critical thought process through the design stages will help students in retaining the material much better. I therefore strongly urge students to not miss classes, and to participate actively in class discussion.
- The tutorials will focus on problem solving, which will not only consolidate and apply the theory learnt in the lectures, but also provide an opportunity for reflection, critical thinking, and discussion.
- The laboratory assignments will stress the applicability of the course material to the real-world. In-lab experiments will provide first-hand observation of and experimentation with the technologies used in the Internet. The mini-project will provide an opportunity to design and implement a real-world application that works over the Internet.

Teaching strategies

- Lectures – to recap the key concepts covered in the lecture video recordings, and to discuss the rationale behind the design choices.
- Tutorials – to learn problem-solving techniques, employ critical thinking, and reflect and discuss alternative methods.
- Labs – in-lab experiments will provide hands-on experience with networking technologies. The mini-project will provide you with the opportunity to design and demonstrate a real Internet-application.
- Mid-session test – will provide feedback on your understanding of the material.
- Final examination – final test of competency.
Assessment
- Labs/Assignments [30%]:
  - [20%] Experiments will be undertaken in each lab session. Each experiment is worth 5% of the grade, and the best four out of five marks will count towards the grade. Marks for each lab session will be available to you by the next lab session. You are required to prepare beforehand by reading the handouts posted on the course web-page.
  - [10%] A compulsory mini-project will require you to design and develop a real-world application that requires communication over the Internet. The final demonstration of the working code will be in week 13.
- Late submissions will generally attract a penalty for each late day.
- In-class Quizzes [discretionary credit]: Several surprise quizzes will be held in-class, and the credit for these quizzes is discretionary. Specifically, these quizzes will be looked at if you happen to be at the borderline between grades, and your performance in them may determine if you receive extra credit that improves your grade.
- Mid-session test [20%]: This course will have an in-class written test of one hour that will evaluate and provide feedback on your understanding of the material in this course. The test will be held in week 6 (Thu 18 Apr). Re-tests will not be granted in the event that a student misses the test, unless satisfactory written evidence is presented of adverse conditions that prevented the student from taking the test. In such a case, the course coordinator may, at his discretion, conduct the re-test orally with the individual student, typically within two weeks of the original test date.
- Final exam [50%]: This three-hour final exam scheduled by the University will test your overall competency in the course.

Course schedule

<table>
<thead>
<tr>
<th>Week</th>
<th>Topic</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Introduction, Network Protocol Stack, Physical Layer</td>
</tr>
<tr>
<td>2-3</td>
<td>Data Link Layer: Errors, MAC, Wireless, Ethernet</td>
</tr>
<tr>
<td>4-7</td>
<td>Network Layer: IP addressing, forwarding, routing, features</td>
</tr>
<tr>
<td>9-10</td>
<td>Transport Layer: UDP, TCP, socket programming</td>
</tr>
<tr>
<td>11-12</td>
<td>Application Layer: web, email, FTP, DNS</td>
</tr>

</table>

Textbooks and Resources for students
- Papers and other reading material will be posted on the course web-page https://subjects.ee.unsw.edu.au/tele3118/
- It is highly recommended that students look at related courses being offered on-line. For example, the University of Washington (Prof. David Wetherall) is offering the course “Introduction to Computer Networks” on the Coursera on-line platform www.coursera.org – I strongly encourage to look at the slides and video lectures for that course, since they are closely related to the material we cover in class.
- Students seeking resources can also obtain assistance from the UNSW Library; please see info.library.unsw.edu.au/web/services/services.html
Academic honesty and plagiarism

What is Plagiarism?
Plagiarism is the presentation of the thoughts or work of another as one’s own.* Examples include:

- direct duplication of the thoughts or work of another, including by copying material, ideas or concepts from a book, article, report or other written document (whether published or unpublished), composition, artwork, design, drawing, circuitry, computer program or software, web site, Internet, other electronic resource, or another person’s assignment without appropriate acknowledgement;
- paraphrasing another person’s work with very minor changes keeping the meaning, form and/or progression of ideas of the original;
- piecing together sections of the work of others into a new whole;
- presenting an assessment item as independent work when it has been produced in whole or part in collusion with other people, for example, another student or a tutor; and
- claiming credit for a proportion a work contributed to a group assessment item that is greater than that actually contributed.†

For the purposes of this policy, submitting an assessment item that has already been submitted for academic credit elsewhere may be considered plagiarism.

Knowingly permitting your work to be copied by another student may also be considered to be plagiarism.

Note that an assessment item produced in oral, not written, form, or involving live presentation, may similarly contain plagiarised material.

The inclusion of the thoughts or work of another with attribution appropriate to the academic discipline does not amount to plagiarism.

The Learning Centre website is main repository for resources for staff and students on plagiarism and academic honesty. These resources can be located via:

www.lc.unsw.edu.au/plagiarism

The Learning Centre also provides substantial educational written materials, workshops, and tutorials to aid students, for example, in:

- correct referencing practices;
- paraphrasing, summarising, essay writing, and time management;
- appropriate use of, and attribution for, a range of materials including text, images, formulae and concepts.

Individual assistance is available on request from The Learning Centre.

Students are also reminded that careful time management is an important part of study and one of the identified causes of plagiarism is poor time management. Students should allow sufficient time for research, drafting, and the proper referencing of sources in preparing all assessment items.

* Based on that proposed to the University of Newcastle by the St James Ethics Centre. Used with kind permission from the University of Newcastle
† Adapted with kind permission from the University of Melbourne.
Course evaluation and development

- Students are strongly encouraged to provide feedback on the course during lectures, tutorials, and labs, including suggestions for improving the course content, organisation, delivery, and assessment. Such feedback will be considered carefully with a view to acting on it constructively wherever possible.
- Towards the end of the course formal feedback will be gathered using the Course and Teaching Evaluation and Improvement (CATEI) Process.

Other matters

- Expectations and responsibilities of students: Students are expected to attend lectures and tutorials since the material in this course is fairly large and class discussions will show the thought process behind the design, which will help in retention. Group study and problem-discussion is also highly encouraged.
- Special consideration for missed in-class tests requires provision of satisfactory written evidence within a week of the illness of misadventure; the re-test may be conducted orally by the course convenor within two weeks of the date of the missed test. Special consideration for final examination will have to go through the normal University procedures.
- Information on Occupational Health and Safety policies and expectations are available at: www.riskman.unsw.edu.au/ohs/ohs.shtml
- Equity and diversity: Students who have a disability that requires some adjustment in their learning and teaching environment are encouraged to discuss their study needs with the course convener prior to, or at the commencement of the course, or with the Equity Officer (Disability) in the Equity and Diversity Unit (9385 4734). Information for students with disabilities is available at: www.equity.unsw.edu.au/disabil.html. Issues to be discussed may include access to materials, signers or note-takers, the provision of services and additional examination and assessment arrangements. Early notification is essential to enable any necessary adjustments to be made.
